PROFILE

DevOps-focused Computer Science graduate (CGPA: 9.02) with hands-on experience building CI/CD pipelines, Dockerized deployments, Terraform-based AWS infrastructure, and monitoring stacks using Prometheus and Grafana. Currently working in web operations, combining production website QA, automation, and deployment support. Strong fit for junior DevOps, Cloud Engineer, Site Reliability, or Platform Engineering roles where practical project delivery matters more than buzzword knowledge.

PROFESSIONAL EXPERIENCE

eClerx, *Web Operations Analyst* 10/2025 – Present | Mumbai, India

- Supported production website operations for high-volume client websites, including content QA, page validation, hyperlink auditing, responsive testing, and deployment readiness checks.
- Built **SiteLens**, a Chrome extension to automate repeated audit checks for accessibility, SEO, UI consistency, and broken links, reducing manual review time by approximately 60%.
- Performed WCAG/accessibility validation, live site replication checks, and production content verification before release.
- Automated repetitive QA and web operations tasks using JavaScript and scripting, improving consistency in pre-deployment checks.
- Collaborated with internal teams to identify website defects, validate fixes, and maintain release quality standards.

EDUCATION

Guru Nanak Khalsa College, Mumbai, *BSc in Computer Science*

2022 – 2025 | Mumbai, India

CGPA: 9.02 / 10

SKILLS

AWS, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, CI/CD, Linux, Python, Bash, Prometheus, Grafana, Loki, OpenTelemetry, Git, REST APIs, SQL, JavaScript

PROJECTS

Automated CI/CD Deployment Pipeline 🐙, *GitHub Actions · Docker · Railway · Bash*

- Built an end-to-end CI/CD pipeline that automatically builds, tests, and deploys Dockerized applications on every GitHub push with zero manual intervention
- Configured multi-stage GitHub Actions workflows with environment-based deployment gates for staging and production
- Reduced deployment time by 80% compared to manual deployment process

Cloud Infrastructure Monitoring & Alerting System 🐙, *Prometheus · Grafana · Docker Compose · Python*

- Deployed a full observability stack using Prometheus and Grafana via Docker Compose to monitor CPU, memory, disk, and network metrics across containerized services
- Configured custom alerting rules with Telegram bot integration for real-time incident notifications
- Visualized system health trends via Grafana dashboards with custom alerting thresholds

AWS Infrastructure Automation with Terraform, *Terraform · AWS EC2 · S3 · IAM · GitHub Actions*

- Automated provisioning of AWS infrastructure including EC2 instances, S3 buckets, IAM roles, and Security Groups using Terraform with modular configuration
- Integrated Terraform workflows into GitHub Actions CI pipeline for automated plan, apply, and state management using S3 backend with DynamoDB locking
- Configured AWS CodeDeploy integration for automated application deployments via GitHub Actions pipeline
